

Case Study: Dubai Offices

Stylish, functional, subtle. The new workplace of Lightitude Dubai.

Come countries are just blessed with good weather - Here in Denmark, every day with bright sunshine is celebrated, especially when it's warm. What is the exception for some, is the norm for others: In the United Arab Emirates, the sun is shining (nearly) every day.

Our distributors in the Middle East gave us the honour of supplying the lighting for their offices - and they did so because they required lights that represent their core values - Stylish design, but also state-of-the-art performance.

Lighting challenges

When offices are blessed with the presence of ample daylight, it would come close to a crime to use bulky, large office luminaires - taking away lots of natural light, and casting unwanted shadows. Recessed lighting can be a solution, but is most of the time rather dull, uncreative, and expensive to install.

Especially in Lightitude's Case, where the designers chose a beautiful wooden ceiling to soften the otherwise modern and cool architecture of the building, recessed lighting was a no-go. They looked for something that was subtle, but still clever enough to be a design statement.

The LED iBond solution

"The Plane" by LED iBond offered a new approach: with only 6 mm thickness, it does not interfere with sightlines, compared to the typical 50mm or more that are typical for modern office luminaires. It also offers high brightness levels, to still offer a level of contrast between the desk spaces and the natural light omnipresent in the room, creating a natural division of the room through good lighting design.

Each luminaire is individually controllable for the top and the bottom section, emitting up to 2750 lumens on each side.

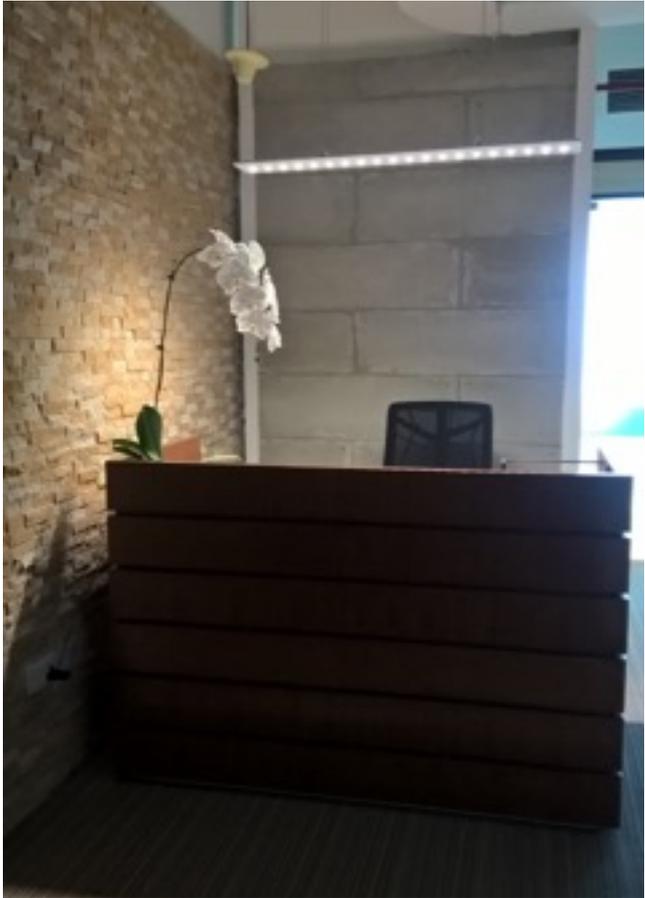

Another key factor for the client was the ease of cleaning that is enabled by the magnetic connection of the panel to the ceiling mount.

We are especially proud when we make our clients happy, here is what one of the Managers at Lightitude has to say: "LED iBond was such a different solution, that we were a bit sceptical at first. We saw the samples, we liked the technology, but were not sure how it would work in a built environment. Now, with everything and us working here day in and day out, we are overwhelmed by how the lighting really defines our office - we get fantastic feedback from both our staff, and our clients!"

Case Study: Dubai Offices

Stylish, functional, subtle. The new workplace of Lightitude Dubai.

Designer/Architect:
Lightitude Design Team

Scope:
10 Units for Work Stations and Reception

Special features:

- Individual Control of direct and indirect portion of light
- Glare Control Lens, low UGR
- Magnetic attachment for easy cleaning

Installation date:
2016

Colour temperature:
3000K
