

# Light Management

Easy set up and manage your light solution online by tablet, phone and PC interface. Design your preferred multiple scenarios. Compliant with DALI v2.0.

Set a time schedule or use intelligent twilight sensors to follow the natural lights decreasing to regulate the brightness of the light. That is convenient and energy saving.

Movement and daylight sensors helps reducing energy consumption and maintenance costs while extending the lifetime of the installation. Securing the best light experience in changing surroundings.

Optional add-ons for hardware: PIR – Build into Light panel for specific area use and energy saving. Build in Backup Battery Light in panels for security and safety lights.
